

ABSTRACT OF THE DISCLOSURE

System and method for disconnected operation of thin-client applications. In
embodiments, a thin client on a client system may be used to access an application on a
5 server via a network. Prior to the thin client disconnecting from the application, a version
of the application including at least a portion of the application logic of the application
may be downloaded to the client system to be accessed using the thin client during
disconnected operation of the client system. After reconnection of the thin client to the
application, changes made, if any, to application data on the client system may be
10 integrated into the application data on the server.
